

Brand new and one step ahead again

Bull's eye for your testing safety

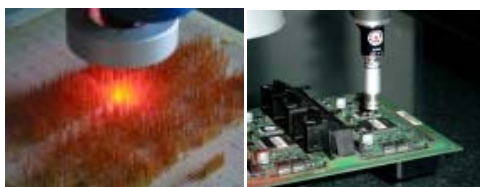

Your benefit:

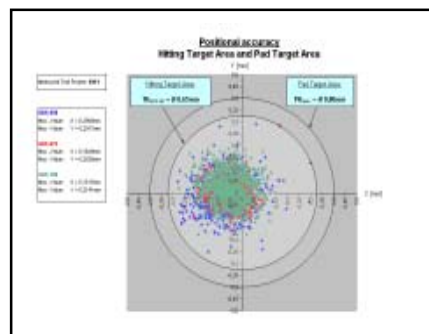

- Documented contacting accuracy in a protocol
- Stable testing equipment
- Higher level of safety
- Maintenance within 48 hours (on prior agreement)
- Longer life-expectancy
- No idle times in the production dept. due to breakdowns with wearing parts and subsequently clear calculable quantities in the production dept.
- Guarantee to fulfil the demands put on the fixture
- Reduction of pseudo-faults with the clear definition of the parameter „contacting accuracy“
- Faster fault analysis

3D Multi-sensor Coordinate Measuring Machine:

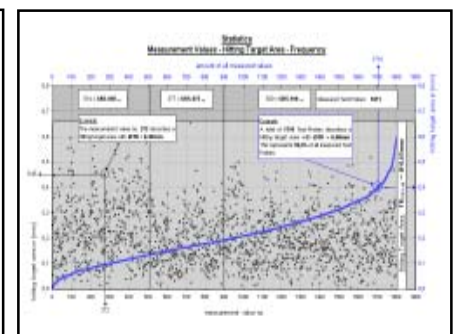

- Measurements as exact as 0.001 mm
- 100% product safety
- Quality through precision

Contact-less and tactile measuring

Excerpt from the checking protocol

INGUN offers:

- Determination of the position accuracy
- Measurement of Test Probes as well as punctures in the test pads
- Checking of both INGUN and third-party Test Fixtures
- Verification of the accuracy of the PC Board in accordance to changes of batches, materials and suppliers
