VIN 2040-07 Vacuum Interchangeable Fixture

The Vacuum Interchangeable Fixture VIN 2040-07 consists of a base unit and an Interchangeable Kit. A float-mounted Intermediate Interface, which is assembled the Interchangeable Kit, provides the signal transfer. It is designed for standard interface Blocks from INGUN. Up to maximum eleven Interface Blocks can be used.

The following Interface Blocks are available: 170-pole Signal Block, 65-pole High-current Block, HF-Block, LWL-Block, Hyperbolic Block, 8-pole Pneumatic Block. The Interface Blocks are assembled vertically and are therefore insensitive to contamination.

The Interchangeable Kit can be exchanged when the Fixture is closed. It is placed in the Fixture Base Unit from above and then closed and locked by means of a rotating knob. The unlocking is done in the same way. The assembled Interchangeable Kit can be hinged open as in the case of all INGUN Fixtures and therefore allows easy access to the internal wiring.

The Vacuum Interchangeable Fixture is available for all common Test System Interfaces.

Technical Data:

Overall size of Base Unit:	550 x 450 mm
Usable Area of Interchangeable Kit:	430 x 270 mm

Ordering Description:

Base Unit VIN 2040-07:	Part No. 27584
Interchangeable Kit ATS 2040-07:	Part No. 27585
